

Services

Book Development - Concept to finished manuscript: research planning, archival discovery, interviewing, narrative structure, and editorial management. We serve authors, families, family foundations, and leaders who want a durable, elegant volume.

Research Projects - Deep, documented inquiries for clients. Source collection, provenance, document analysis, and clear findings written for decision-makers.

Editing - Developmental edits, line-edits, and reference checks that bring clarity and authority. We tune voice, structure, and sourcing without losing what is distinctive.

Genealogical Research - Three pathways: family histories, company histories, and genealogy. We authenticate records, map lineages, and produce readable narratives with annotated documentation.
